

ASSIGNMENT 1:

Draw your Home Network Topology and explain it.

COMPONENTS -

- 1) Internet - The entry point into the house network provided by an internet service provider. It connects your home network to the external world such as websites, online services and cloud applications.
- 2) ISP Modem/Router - This device connects to your ISP's service and acts as the gateway for all devices in the network. The router provides wireless connectivity for devices while the modem connects to the internet. The router is the brain of the network.
- 3) Devices connected to Wifi - Laptop, Smartphone, Smart TV, Wifi-Printer, Smart speaker.
- 4) Gaming console - A gaming console connects to the router via wifi for online gaming.

Network Topology type -

Star Topology - all devices connect directly to the central router. The router handles traffic between devices and the internet and its advantage is easy to setup, manage and expand. If one fails rest of the network remains functional.
